

Bird Netting

Bird netting prevents pigeons, starlings and other pests from gaining access to roosting and nesting areas off your property. Bird Netting will seal off all openings and other havens for pest birds such as pigeons, starlings, sparrows and black birds from roosting. Bird Netting is easy to install and with nearly no upkeep to make to the bird netting makes bird netting hassle free and an inexpensive sensible choice. Bird Netting is lightweight, pliable so it won't deteriorate with age or lose strength when exposed to the elements of weather.
