

Fleas and Flea infestation

If you have a flea infestation, make sure your pets are treated (see your vet) and use an effective flea insecticide for the home. Pet shops are a useful supplier of flea insecticides. We at APS Pest Control supply a service for flea infestation and can also send advice sheets on fleas.

Having had a flea treatment (self treating or otherwise) you will still see fleas emerging from pupation - however a residual flea insecticide will last for several weeks and gradually kill emerging fleas. Do not Hoover for at least three weeks after a treatment and cover fish tanks during flea treatment. There are some excellent advice sites on the web if you simply type in 'Flea Control'.

A P S Pest Control Charges for Treating Fleas are Listed Below!

The charge for treating fleas infestation - starts from £125 +VAT
