

Residential Balconies

Pigeon netting can be used to keep pigeons from roosting on steel work construction of balconies. Using the required fixings anchor eyebolts will be installed to the steel work approximately every 10 Metres, with intermediate fixings every 600mm. The intermediate fixings will support the steel wire rope that will follow the steel work structure vertically & horizontally.

Once the fixings and steel wire rope have been installed, the netting can be connected to the steel wire rope using hog-ring staples. The netting is connected to the wire every 50mm until it is totally suspend. This netting system is guaranteed to stop pigeons roosting in unwanted areas, and droppings contaminating wall, pipe, floors Etc.
